DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 5-10, 14 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoshizawa et al. [EPO 0 637 038 A2].

Yoshizawa et al. discloses a pulse transformer in an interface module for local data network with including magnetic core made of an amorphous or nanocrystalline alloy with a permeability greater than 15000 and a winding of a number of turns between 5 and 25 [see examples 1-2 and Tables 1-2].

Claims 1-4 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by EPO 0 378 823.

EPO 0 378 823 discloses a pulse transformer in an interface module for local data network with including magnetic core made of an amorphous or nanocrystalline alloy with a permeability greater than 15000 and a winding of a number of turns between 5 and 25 [see examples 3-6].

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are

Art Unit: 2832

such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-12, 15 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshizawa et al. in view of Suzuki et al. [US 5,741,373].

Yoshizawa et al. discloses the instant claimed invention except for the specific composition of the magnetic alloy.

Suzuki et al. discloses the composition of the magnetic alloy [Tables 1-3] for a core structure in a transformer.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the magnetic composition of Suzuki et al. in the core structure of Yoshizawa et al. for the purpose of providing high saturated magnetic flux density.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TUYEN T NGUYEN whose telephone number is 703-308-0821. The examiner can normally be reached on M-F 8:30-6:30.
